

## Portfolio Software

May 24, 2016

For more information regarding how to access software from Los Alamos, contact the [Software Team](#).

### End User License Agreements (EULA)

These software tools are available through [EULAs](#).

- [KIVA](#) The KIVA family of Computational Fluid Dynamics (CFD) software predicts complex fuel and air flows as well as ignition, combustion, and pollutant-formation processes in engines.
- [NJOY2010](#) [NJOY2012](#) The NJOY Nuclear Data Processing System is a comprehensive computer code package for producing pointwise and multigroup cross sections and related quantities from evaluated nuclear data in the ENDF format, including the latest US library.
- [PARMELA](#) PARMELA is a multi-particle beam dynamics code used primarily for electron-linac beam simulations. The name comes from the phrase, "Phase and Radial Motion in Electron Linear Accelerators."
- [PARMTEQ](#) PARMTEQ and several other RFQ design codes comprise this group of codes and are used to design high-performance radio-frequency quadrupole (RFQ) linacs. PARMTEQ is an acronym for "Phase and Radial Motion in a Transverse Electric Quadrupole."

### Executable Downloads

FCI deploys "lite" versions of software users can download with a single click. These downloads are more basic versions designed to provide users with a trial of the software. Selected executable software is available as proprietary source code that can be licensed for a fee.

- [Disco](#) Disco provides dynamic control and monitoring functionality for multiple Teledyne Isco D-Series syringe pumps and includes features for advanced pump routine development.
- [FEHM \(Finite Element Heat and Mass Transfer Code\)](#) FEHM is used to simulate groundwater and contaminant flow and transport in deep and shallow, fractured and unfractured porous media throughout the US DOE complex.
- [Improvements to MARFA Code \(released as MARFA version 3.2.3\)](#) The software will be used to assess long-term migration of radioactive material and other contaminants beneath the surface of the Earth.
- [PARMILA](#) Parmila version 2 is an ion linac particle dynamics code.

- [POISSON/SUPERFISH](#)Poisson Superfish is a collection of programs for calculating static magnetic and electric fields and radio-frequency electromagnetic fields in either 2-D Cartesian coordinates or axially symmetric cylindrical coordinates.
- [RAVEGRID](#)RaveGrid (Raster to Vector Graphics for Image Data) version 2.5\* is an image vectorization and image segmentation application that takes your raster images and turns them into smaller, editable vector images in the SVG format.
- [RELIC](#)The RELIC software package allows the user to calculate intermediate-coupling wavefunctions, energy levels, transition strengths (Judd-Ofelt theory), and radiative decay properties of tri-positive lanthanide ions in solids.
- [Seismoacoustic Software](#)Addressing local and regional-scale seismological and infrasound problems through a combination of theory, data analysis and field deployments in support of United States treaty/explosion monitoring.
- [SEQSTRAP](#)SEQSTRAP iteratively extrapolates partial length nucleic acid sequences based on comparisons with similar, overlapping sequences.
- [SEQUEDEX](#)Sequedex classifies DNA sequences by analyzing collections of sequences in new ways.
- [Total-Variation Regularized Numerical Differentiation, Version 1.0](#)
- [Trace](#)Trace is an interactive beam-dynamics program that calculates the envelopes of a bunched beam, including linear space-charge forces, through a user- defined transport system. Trace 3-D provides an immediate graphics display of the envelopes and the phase-space ellipses and allows nine types of beam-matching options.
- [Trident Compiler](#)Trident is a compiler for floating point algorithms written in C, producing circuits in reconfigurable logic that exploit the parallelism available in the input description.

## Mobile Apps

Los Alamos offers free mobile apps on [Google Play](#) and the [App Store](#).
